**CENSUS-FARMS BY SIZE; AREA AND
USE OF AGRICULTURAL LAND
FOR PROVINCES AND
COUNTIES, 1966**

This report presents a classification by size and distributions by different uses of agricultural land of the "census-farms" reported in the 1966 Census of Agriculture. The census was taken as of June 1, 1966.

Comparable information for "commercial farms" (defined as the "census-farms" that reported sales of agricultural products during the previous 12 months of \$2,500 or more) will be published later.

Definition of a "census-farm"

For census purposes, a "census-farm" was defined as an agricultural holding of one acre or more with sales of agricultural products during the previous twelve months of \$50 or more. The 1966 definition of a "census-farm" was the same as in 1961. However, there was a change in definition between the 1956 and the 1961 Censuses. Users of the historical data presented in this report are referred to the 1961 census volumes where the effect of the definition change was discussed.

Improved land

This is the total of the area under crops, improved pasture, summer fallow and other improved land.

Area under crops

Included in this figure is the total area of field crops, fruits, vegetables, nursery and greenhouse products.

Improved pasture

All land which was used for pasture and grazing and which had some improvements made to it in recent years was included in this item. The more common types of improvements that had been made were seeding and/or fertilizing, weeds and/or brush cleared or controlled, an effective drainage system established and the use of an irrigation system. Natural prairie or pasture land and hay land that was pastured after the hay was cut were not reported as improved pasture.

**FERMES DE RECENSEMENT SELON LA
GRANDEUR; LA SUPERFICIE ET
L'UTILISATION DE LA TERRE
AGRICOLE, PROVINCES ET
COMTÉS, 1966**

Le présent rapport donne le classement selon la grandeur et la répartition selon l'utilisation de la terre agricole des "fermes de recensement" déclarées au recensement de l'agriculture, le 1er juin 1966.

Les renseignements comparables relativement aux "fermes commerciales" ("fermes de recensement" dont les ventes de produits agricoles au cours des 12 derniers mois ont été de \$2,500 ou plus) seront publiés plus tard.

Définition d'une "ferme de recensement"

Aux termes du recensement, une "ferme de recensement" était une exploitation agricole d'une acre ou plus dont les ventes de produits agricoles au cours des 12 derniers mois ont été de \$50 ou plus. La définition de 1966 d'une "ferme de recensement" était la même que celle employée au recensement de 1961. Cependant, il y avait une variation entre la définition qui a servi au recensement de 1956 et celle du recensement de 1961. Les usagers des données chronologiques présentées dans ce rapport s'en rapporteront aux volumes du recensement de 1961 où le résultat du changement apporté à la définition était discuté.

Terre défrichée

Superficie totale des terres mises en culture, des pâturages défrichés, des jachères et autres terres défrichées.

Terre en culture

Superficie totale des grandes cultures, des cultures de fruits, de légumes, des produits de serre et de pépinière.

Pâturage défriché

Toute terre utilisée comme pâturage et pacage et où des travaux d'améliorations ont été faits durant les dernières années. Les genres de travaux les plus répandus sont l'ensemencement et (ou) la fertilisation, la destruction et (ou) le contrôle des mauvaises herbes et (ou) des broussailles, l'établissement d'un système efficace d'écoulement et l'utilisation d'un système d'irrigation. Les prairies naturelles ou pâturages et les terres à foin qui avaient servi de pâturage après la fenaison n'étaient pas déclarées comme pâturage défriché.

Summer fallow

Land from which no crop was to be harvested during 1966 but which was cultivated or worked during the year for weed control and/or moisture conservation was enumerated as summer fallow. Areas which were sown to a crop with the intention of ploughing under as green manure were also enumerated as summer fallow. Land ploughed or cultivated after a crop (such as hay or fall rye) had been harvested was enumerated as cropland.

Other improved land

This item includes the area of barnyards, home gardens, lanes and roads on "census-farms". It also includes agricultural land that had been cultivated at one time but which was not being pastured or summer-fallowed. Areas of new breaking that had not yet been cropped were also enumerated as "other improved land".

Woodland

Woodlots on "census-farms", private land leased from others for woodcutting, sugar bush and cutover land with seedlings or trees which have or will have value as timber, fuelwood or Christmas trees, were included as woodland. The area of trees planted for windbreaks was also included. Large timber tracts run as a business separate from the agricultural operations and which were leased or under permit solely for cutting of forest products were not included.

Other unimproved land

Areas of natural pasture or hay land that had not been cultivated, brush pasture, grazing or wasteland, sloughs, marsh and rocky land, etc., were all included in this item.

Conversion of "arpents" to "acres"

In certain sections of the Province of Quebec, the land measure is the arpent and enumerators reported land areas in this unit. The conversion to acres was made in the Dominion Bureau of Statistics using the factor, "1,000 arpents equal 845 acres"

Jachères

Toute terre qui n'avait pas servi aux cultures en 1966 mais qui était labourée durant l'année pour enrayer les mauvaises herbes, et (ou) conserver l'humidité était classée comme jachère. Les superficiesensemencées d'une certaine culture et retournées ensuite comme engrais vert étaient aussi classées comme jachères. La terre labourée après une récolte (foin ou seigle d'automne) était classée comme terre en culture.

Autre terre défrichée

Superficie des basses-cours, des jardins potagers, des routes et des sentiers des "fermes de recensement" ainsi que la terre qui a été cultivée un certain temps, mais qui n'a pas servi de pâturage ni de jachère. La superficie des nouveaux labours non encore ensemencés était aussi classée comme "autre terre défrichée".

Terre à bois

Les boisés dans les "fermes de recensement", les terres privées louées d'autrui pour la coupe du bois, des sucreries et des déboisés qui ont ou auront de la valeur comme bois d'oeuvre, de chauffage ou arbres de Noël. La superficie des arbres plantés comme brise-vent était également incluse. N'étaient pas compris, les grands lots boisés exploités sur un pied commercial indépendamment des exploitations agricoles et à l'égard desquels on obtenait un bail ou un permis exclusivement en vue de la coupe de produits forestiers.

Autre terre non défrichée

Superficie des pâturages ou terres à foin naturels, des broussailles, des terres incultes ou à pacage, des marais, marécages et terrains rocailleux, etc.

Conversion des "arpents" en "acres"

Dans certaines parties de la province de Québec, la terre se mesure en "arpents" et les agents recenseurs ont inscrit la superficie suivant cette unité. La conversion en acres s'est faite au Bureau fédéral de la statistique, à raison de "1,000 arpents pour 845 acres".
